

App 174 Performance Overview — Net profit by country, app 174, April 2024

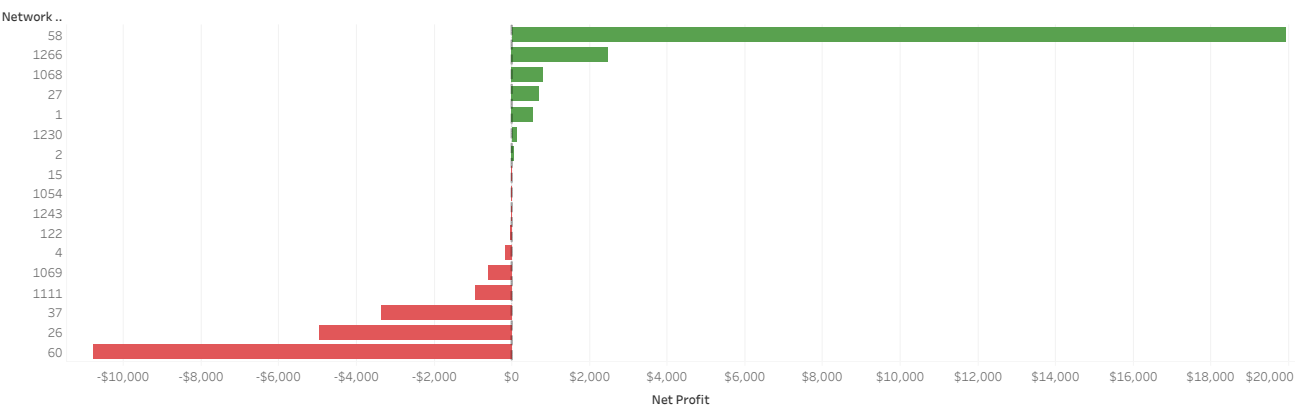

Profit today vs profit if loss-making networks are cut

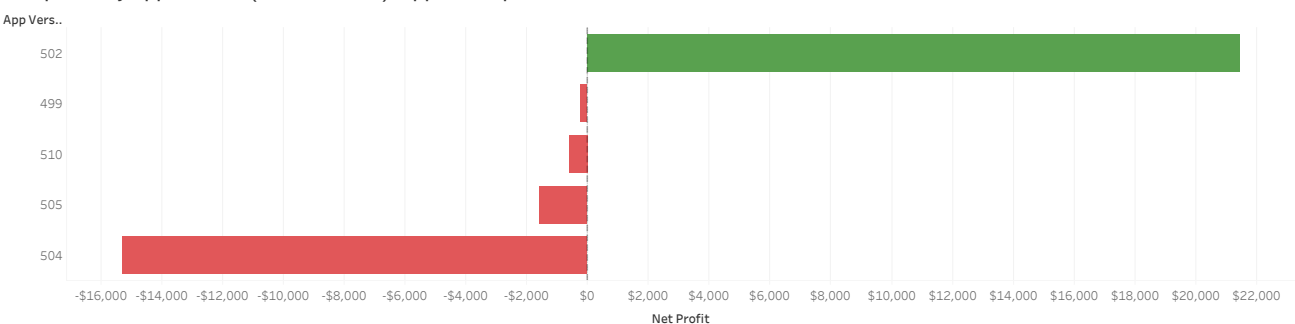

Revenue per install by network vs break-even, app 174, April 2024

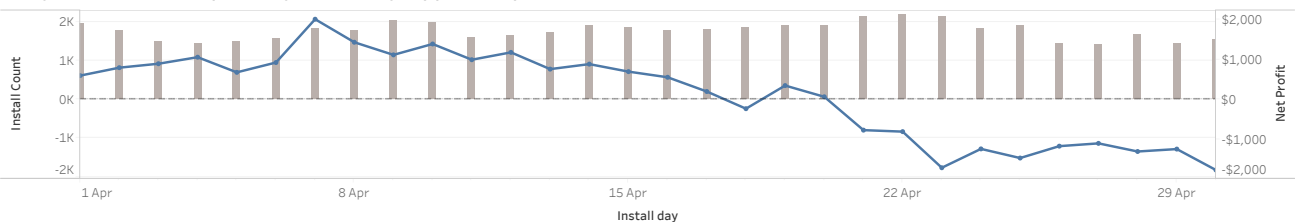

Net profit by network, app 174, April 2024

Net profit by app version (100+ installs), app 174, April 2024

Daily installs and net profit by install day, app 174, April 2024

Improvement areas

- Reprice or pause networks 60, 26, and 37, which generated most of the losses.
- Investigate why France monetises below break-even and test a lower bid or different partner-app mix.
- Check versions 505 and 510 for possible tracking or monetisation issues because they recorded no attributed revenue.
- Give version 504 more time before judging performance because many installs occurred late in April.
- Improve missing and unknown user_install_id tracking so revenue can be attributed correctly.
- Increase spend on network 58 gradually while monitoring whether revenue per install remains profitable.
